COMPLETE SEO AUDIT REPORT

FreeInternships.in

Digital Marketing Internship Project

Student	Dimpal Aswani
Student Code	DAS009566
Internship ID	4363
Task ID	#3673 / DM-SEO-001
Website Audited	https://www.freeinternships.in/
Audit Evidence Date	17 September 2026

Prepared from the website audit screenshots supplied for this project. Metrics not visible in the supplied evidence are marked as not verified.

1. Executive Summary

This report presents an SEO audit of FreeInternships.in using the supplied Google PageSpeed Insights and SEMrush screenshots, together with visible robots.txt and sitemap.xml evidence. The review covers technical performance, crawlability, on-page SEO indicators, off-page metrics, and recommended next steps.

The supplied evidence shows a mixed performance picture. Mobile real-user Core Web Vitals are marked as passed, while the desktop real-user assessment is marked as failed because the visible CLS value is 0.23. The PageSpeed lab performance scores are 34 on mobile and 61 on desktop. SEMrush shows an Authority Score of 8, estimated organic traffic of 908, 111 organic keywords, 61 referring domains, and 75 backlinks.

The most important action areas are improving mobile lab performance, reducing desktop layout shift, resolving the 38 SEMrush errors and 455 warnings, improving authority and relevant backlinks, and validating the website's internal SEO and Core Web Vitals configuration.

Evidence limitation: this report is based on screenshots supplied by the student. Google Search Console data, a complete crawl export, individual broken URLs, exact title/meta tag inventories, and detailed backlink quality data were not supplied and therefore are not presented as verified findings.

2. Project Overview

Project	Complete SEO Audit of FreeInternships.in
Domain	Digital Marketing
Organization	Data Alcott Systems
Target audience	Students, freshers, and internship seekers
Primary objective	Identify SEO issues and provide actionable recommendations
Tools evidenced	Google PageSpeed Insights and SEMrush

3. Technical SEO Audit

3.1 PageSpeed Insights – Mobile

Metric	Observed result	Interpretation
Core Web Vitals assessment	Passed	Real-user assessment shown as passed
LCP	2.0 s	Within the displayed green range
INP	134 ms	Within the displayed green range
CLS	0	No layout shift shown in field data
FCP	1.6 s	Displayed as green
TTFB	0.9 s	Displayed as orange
Performance score	34	Needs improvement
Accessibility	75	Improvement opportunity
Best Practices	100	Strong displayed score
SEO	85	Improvement opportunity

Mobile finding: the real-user Core Web Vitals assessment is passed, but the lab Performance score is 34. This suggests that the site should still be optimized for loading and rendering performance, especially large images, JavaScript, third-party resources, and above-the-fold content.

3.2 PageSpeed Insights – Desktop

Metric	Observed result	Interpretation
Core Web Vitals assessment	Failed	Real-user assessment shown as failed
LCP	1.9 s	Displayed as green
INP	30 ms	Displayed as green
CLS	0.23	Layout shift needs improvement
FCP	1.4 s	Displayed as green
TTFB	0.8 s	Displayed as orange
Performance score	61	Moderate; improvement opportunity
Accessibility	79	Improvement opportunity
Best Practices	96	Generally strong
SEO	92	Good displayed score

Desktop finding: the visible CLS value of 0.23 is the clearest performance issue. The website should reserve space for images, banners, advertisements, and dynamic elements so that content does not move while the page loads.

3.3 SEMrush Site Audit

SEMrush item	Observed result
Pages crawled	100 / 100
Site Health	71%
AI Search Health	78%
Errors	38
Warnings	455
Crawlability	85%
HTTPS	98%
Site Performance	91%
Internal Linking	84%
Markups	87%
Core Web Vitals	Not implemented in the displayed project view
Internal SEO	Not implemented in the displayed project view

SEMrush finding: the project dashboard displays 38 errors and 455 warnings. These should be opened inside SEMrush and exported so that each issue can be mapped to an exact URL, severity, and recommended fix. The screenshot alone does not identify the individual errors.

3.4 Robots.txt and Sitemap

- The supplied robots.txt screenshot shows multiple user-agent sections and a visible Sitemap directive pointing to the website sitemap.
- The supplied sitemap.xml screenshot displays a list of URLs, indicating that an XML sitemap is available at the checked address.
- A full validation of every sitemap URL, last-modified date, canonical URL, and indexability status requires opening the files or using a crawler; these details are not claimed from the screenshot alone.

Recommendation: keep robots.txt concise, avoid blocking important public internship and blog pages, submit the sitemap in Google Search Console, and remove outdated or redirected URLs from the sitemap.

4. On-Page SEO Audit

The supplied screenshots do not show the complete HTML source or page-level title/meta inventories. Therefore, the following are audit checks and recommendations rather than confirmed page-level defects.

- Review the homepage and major internship landing pages for unique title tags.
- Write descriptive meta descriptions aligned with the actual page content.
- Ensure each important page has one clear, relevant H1 heading.
- Use logical H2 and H3 headings for internship details, eligibility, benefits, process, FAQs, and calls to action.
- Add descriptive alt text to meaningful images and avoid using empty or generic alt text where the image conveys information.
- Improve internal links between the homepage, internship pages, blog articles, FAQ pages, and contact/registration pages.
- Avoid repetitive keyword use. Use natural variations such as online internship, digital marketing internship, student internship, and practical training only where relevant.
- Review consistency of internship pricing, certificate claims, eligibility, duration, and registration information across pages.

5. Off-Page SEO Audit

Metric	SEMrush screenshot result	Comment
Authority Score	8	Low authority indicator in the displayed tool
Organic Traffic	908 (-2.4%)	Tool estimate; date shown as 17 Sep 2026
Organic Keywords	111 (+44%)	Tool estimate
Referring Domains	61	Displayed count
Backlinks	75	Displayed count
Paid Traffic	0	Displayed count

Off-page finding: the displayed Authority Score is 8, with 61 referring domains and 75 backlinks. The next step is to inspect the quality and relevance of those domains rather than focusing only on quantity.

Recommendations: publish useful internship guides, build legitimate educational partnerships, promote original blog content, maintain consistent brand profiles, and avoid artificial or spammy link-building.

6. Competitor Analysis

Potential comparison websites for the internship sector include Internshala, Unstop, and LetsIntern. They should be compared using the same country, device, database, and date settings in the chosen SEO tool.

Comparison area	What to compare
Organic keywords	Shared keywords, missing keywords, and relevant landing pages
Content	Internship guides, FAQs, eligibility, projects, and blog depth
Backlinks	Referring domains, relevance, and link quality
Technical SEO	Mobile performance, indexability, structured data, and internal linking
Conversion UX	Clarity of registration, fees, certificates, and calls to action

Competitor metric values were not supplied in the screenshots, so no competitor ranking or numerical comparison is fabricated in this report.

7. Prioritized Action Plan

Priority	Action	Reason
High	Investigate the 38 SEMrush errors	Errors may affect crawling, indexability, links, or page experience
High	Reduce desktop CLS from 0.23	Desktop real-user Core Web Vitals assessment is shown as failed
High	Improve mobile lab Performance score of 34	Mobile performance is the weakest displayed PageSpeed score
High	Export and review the 455 warnings	Warnings may reveal repeated site-wide issues
Medium	Improve accessibility from 75 mobile / 79 desktop	Supports usability and inclusive access
Medium	Review internal linking score of 84%	Strengthen navigation and discovery of important pages
Medium	Review markup score of 87%	Validate structured data and eligibility for rich results
Medium	Inspect backlinks behind Authority Score 8	Prioritize relevant, trustworthy referring domains
Low	Create content around student search intent	Build topical relevance and long-tail visibility

8. Conclusion

The supplied evidence indicates that FreeInternships.in has several positive SEO signals, including passed mobile real-user Core Web Vitals, strong displayed best-practice scores, HTTPS coverage of 98% in SEMrush, and a measurable organic keyword and backlink footprint.

At the same time, the audit identifies clear improvement opportunities: mobile lab performance is 34, desktop CLS is 0.23 with a failed desktop field assessment, SEMrush displays 38 errors and 455 warnings, and the Authority Score is 8. These items should be addressed in priority order and re-tested after implementation.

A complete final validation should include Google Search Console performance and indexing data, a full SEMrush issue export, detailed backlink quality analysis from Ahrefs or another tool, page-level title/meta/headings, and a complete broken-link report.

9. Evidence Appendix
